INFORMATION:

ITEM TITLE: **Flocculator Replacement Project at College Hill Water Treatment Plant**

RECOMMENDATION: Approve the attached resolution authorizing the City Manager to execute the construction contract for the referenced project.

SUMMARY: Within the water treatment process at the College Hill Water Treatment Plant (CHWTP) there are large mixing units called "Flocculators". They are used to mix chemicals into raw water at the beginning of the treatment process. There are 12 units total. Six are original equipment, dating back to the late 1950's, when the plant was built. These units require constant repair and have reached the end of their useful life and will be replaced. The remaining six units were installed in 1985 and only require new drive motors. All of the units are located atop two 79' tall tanks and will require related structural and electrical work.
